Inputs
Simulation and verification
Outputs
Scenario (YAML)
economy, misstatements, regimes, costs, parameter sweep
synth
fiscal year and next days, counterparties, mirror records, adoption
formats
general-ledger CSV, SAF-T Financial XML, checks of real ledgers
misstate
backdate (also across the year end), fictitious, inflate, duplicate, round trip, tamper (labelled)
ledger + merkle
hash chain, fiscal context, commitments, RFC 9162 proofs, integrity, cut-off and duplicates
audit + psi
sampling with opinion, reviews, ledger checks, cross-ledger matching PSI-style simulation
disclosure, lending
dated disclosure, quarterly snapshots, credit and over-advance
metrics
detection and correction, annual misstatement, opinions, hours
scenario, report, CLI
replications, sweeps, CSV, figures, HTML report
